

Steroid Use in Pediatric Fluid and/or Vasoactive Infusion Dependent Shock – Pilot Study

RECRUITMENT UPDATE!

As of December 3rd, four patients have been enrolled at CHEO. All four patients were enrolled using the deferred consent model and informed consent was obtained shortly after enrolment without issue.

CHANGE TO ELIGIBILITY CRITERIA

Please note that we have made two small changes to the study exclusion criteria. **An updated protocol and SOP will be circulated shortly.** An exclusion criteria has been added that excludes patients who were previously enrolled in the STRIPES study. In addition, the exclusion criteria regarding steroid use prior to enrolment has been modified. This criteria previously stated that patients would be excluded if they had received steroids in the last 24 hours, or >1 dose in the last 10 days. The adjusted criteria now states that patients will be excluded only if they are currently receiving steroids for shock prior to randomization.

SITE PROGRESS TO DATE

This table summarizes the status of each site participating in the STRIPES study. If you need any assistance to move things forward at your centre, please contact the study coordinator.
